Census Data Analysis

Census is a process of gathering information from the people to understand the functioning of the government on Village, Town, City, State and national level. Census is conducted in different countries around the world and it helps in addressing lot of issues like Poverty, illiteracy, Sickness etc. Indian Census data has also helped in addressing lot of key issues like Socio-Demographic Determinants of Child Sex Ratio and its Regional Variation in India. The analysis help in presenting a picture to people and government using a statistical model and help tackling some key issues like Gender Biasedness at Birth and Low Women Sex Ratio.
